

ETL and Data Warehousing that Makes a Difference to Your Business

TX2014 provides powerful extract, transform and load capabilities, strong data warehousing, and rich functionality. This release offers new features as well as improvements and enhancements of existing features.

SMOOTH INTEGRATION WITH SALESFORCE.COM® ADAPTER

You can now extract data from Salesforce.com quickly and with ease. You can analyze your organization's sales and CRM data and combine those data with data from other production systems, so that you get a 360-degree view of your business.

CUBE PERSPECTIVES – WHAT YOU SEE IS WHAT YOU NEED

While some cubes are limited in scope, others are very complex and contain multiple measures and dimensions. For a business user, it can be a frustrating experience to navigate the measures and dimensions of a complex cube when trying to locate the data that is relevant for their reporting requirements. That's why TX2014 supports the use of perspectives on cubes. Perspectives allow you to create views that contain only a subset of the data in the cube. So if a user only needs sales forecasting data, then that's what he or she sees. The cube appears less complex, the user's task becomes more straightforward, and valuable time is saved.

EFFORTLESS IMPORT OF CUSTOM DATA FROM MICROSOFT® EXCEL®

Excel is often the tool of choice for custom data entry. That's why you can now import custom data directly from Excel into TX2014 – fast and easy. This means, you can take advantage of all the data entry features in Excel such as AutoComplete, copy and paste, and formulas. And you save precious time because you don't have to enter the data manually in TX2014.

timeXtender® software

timeXtender® is all about simplifying the data warehouse process and minimising the time spent on turning complex data into valuable information. Our unique, agile software brings you results five times faster than other business intelligence solutions on the market. In an easily comprehensible design, customised to accommodate the specific requirements in your company. Around the world, more than 2600 businesses in 60 countries benefit from the expertise and flexibility built into the timeXtender® software – and we trust you will, too.

EASY SYNCHRONIZATION OF DATA TYPES

When the data types in your system don't match the data types of your data source, it's a frustrating situation. It's time-consuming and tedious work to get it right. TX2014 changes that. Simply use the Synchronize Data Types feature to verify that a data type in a data warehouse table matches the data type of the data source. Whenever differences are found, the system suggests the most appropriate data type.

ENHANCED SQL SERVER® ANALYSIS SERVICES FEATURE SUPPORT

As in previous releases, TX2014 utilizes and enhances the features of Microsoft SQL Server Analysis Services (SSAS). This release comes with even more support for SSAS features. You'll now find it much easier to work with cube dimensions, actions and measures.
